### **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on **04/10/2007** has been entered.

#### **Response to Arguments**

Applicant's arguments with respect to claims **1, 2** and **4-29** have been considered but are moot in view of the new ground(s) of rejection.

Applicant has amended the claims to be of a scope not previously considered. Consistent with applicant's argument that the prior art relied on in the previous office action fail to show, disclose and/or teach certain aspects of applicant's invention now recited in the claims filed on **04/10/2007**.

The previous indicated allowability of claims 4-22 is withdrawn.

Claims **1, 2** and **4-29** have now been deemed to contain allowable subject matter however certain claims have been rejected under 35 U.S.C. 112, 2nd paragraph.

Rejections based on the newly cited reference(s) follow.

#### **Claim Rejections - 35 USC § 112**

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims **1, 2** and **4-22** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 3749

In regard to claims 1, 2 and 4-29, the recitation(s) "at least two parallel arranged gas nozzles selectively and coaxially aligning with said gas valve" and "wherein said valve switcher in constructed and arranged to coaxially rotate with respect to said gas valve" fails to properly describe the invention. Rather the nozzles and the "gas emitter" (a fuel passage connected to the valve switcher) are connected to the valve are each arranged parallel to a common axis of the casing. Thus, the valve switcher, and therefore the nozzles, rotate about a common axis (at 31) so as to selectively and coaxially align a selected one of the nozzles with the valve "emitter". Indeed, it is noted (see the follow enlarged portion of applicant's figure 3) the valve (13) is not aligned, but offset, with respect to an opening in the "gas emitter" (22).

Regarding claim 22, the term "horizontally" is a relative term which renders the claim indefinite. The term "horizontally" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite orientation, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Art Unit: 3749

All of the claims should be reviewed for similar and further informalities, to assure an accurate and clear description of the claimed invention.

**Allowable Subject Matter**

Claims **1, 4-7 and 12** would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claims **6-11 and 13-22** would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

**Conclusion**

See the attached USPTO for, 892 for prior art made of record and not relied upon which is considered pertinent to applicant's disclosure.
